Ethics Grand Rounds

Politics, Surveillance, Science & the ‘Cuban Brain Waves’ Case

A Panel Discussion

Noon, April 12, 2018
Sylvester Support Services Building (across from McDonald House)

Starting in late 2016, government personnel stationed in Havana reported sensorial and auditory experiences that were followed by an array of symptoms consistent with the manifestations of traumatic brain injury. A political attack? Surveillance gone awry? Cold War politics revisited? This multidisciplinary panel will address controversies related to the policy issues and ethical aspects of a sequence of events that represents a strikingly peculiar episode in U.S.-Cuba relations.

Moderated by Sergio Litewka, MD, MPH, Director, International Projects, Institute for Bioethics and Health Policy.
